Reversed Phase Chromatography - Wolfson Centre Home Page

Separation and Purification Technology is a journal dedicated to the dissemination of novel methods for separation and purification in chemical and environmental engineering for homogeneous solutions and heterogeneous mixtures. This includes any separation and/or purification of liquids, vapors and gases, with the exception of methods intended for analytical purposes.

VII Desalination & Water Purification Technologies PREFACE Early humans thought that the taste of the water determined its purity. The Sus[™]ruta Samhita, Sanskrit writings about medical concerns (2000 BC), gives evidence that water treatment may well be as ancient

Desalination & Technologies Document inside page

Energy recovery includes any technique or method of minimizing the input of energy to an overall system by the exchange of energy from one sub-system of the overall system with another. The energy can be in any form in either subsystem, but most energy recovery systems exchange thermal energy in either sensible or latent form.. In some circumstances the use of an enabling technology, either ...

Energy recovery - Wikipedia

Lyme disease is the most common tick-borne disease in North America, and is transmitted by blacklegged ticks carrying Borrelia bacteria. Infection by a tick takes at least 24 hours because of the time required for the bacteria to travel from the tick midgut to its salivary glands.

Nutrient Recovery by Biogas Digestate Processing

In molecular biology, gel extraction or gel isolation is a technique used to isolate a desired fragment of intact DNA from an agarose gel following agarose gel electrophoresis. After extraction, fragments of interest can be mixed, precipitated, and enzymatically ligated together in several simple steps. This process, usually performed on plasmids, is the basis for rudimentary genetic engineering.

Gel extraction - Wikipedia

INTRODUCTION. One of the concerns in food industry is the contamination by pathogens, which are frequent cause of food borne diseases. Over the past decade, recurrent outbreaks of diarrhea, combined with the natural resistance of the causative agents, contributed to its status as hazard.
