Central to the research plan is a testbed integrating robot arms, mobile robot bases, hands and grippers, and a range of sensor systems. The reconfigurable testbed will support experiments in advanced perception, mobility, dexterity, and safety for robotic assembly.

the area in which an individual robot performs its task, or inherent uncertainty in the robot's position. Either of these interpretations (or a combination of the two) can be invoked to make a meaningful choice of these parameters. The blob or robot blob function can be any function $K(z) : \mathbb{R}^d \rightarrow \mathbb{R}$ that is non-negative on and satisfies $\int_{\mathbb{R}^d} K(z) dz = 1$.

The links of a robot mechanism can be arranged in serial fashion, like the familiar open chain arm shown in Figure 1.1(a). Robot mechanisms can also have closed loops, such as the Stewart-Gough platform shown in Figure 1.1(b). In the case of an open chain, all of its joints are actuated, while in the case of mechanisms with closed loops only a subset of its joints may be actuated.
