Organicism is the philosophical perspective which views the universe and its parts as organic wholes and either by analogy or literally as living organisms. It can be synonymous with holism. Organicism is an important tradition within the history of natural philosophy where it has remained as a vital current alongside reductionism and mechanism, the approaches that have dominated ...

In biology, homology is the existence of shared ancestry between a pair of structures, or genes, in different taxa. A common example of homologous structures is the forelimbs of vertebrates, where the wings of bats, the arms of primates, the front flippers of whales and the forelegs of dogs and horses are all derived from the same ancestral tetrapod structure.
