To the world at large, a column holds something up. If it appears to be fulfilling its intended purpose, thereâ€™s little reason to give it another thought. As a home inspector, Iâ€™ve seen a lot of columns, and Iâ€™ve given them a lot of thought, specifically two types of adjustable steel columns ...

Observations of the planet Venus include those in antiquity, telescopic observations, and from visiting spacecraft. Spacecraft have performed various flybys, orbits, and landings on Venus, including balloon probes that floated in the atmosphere of Venus. Study of the planet is aided by its relatively close proximity to the Earth, compared to other planets, but the surface of Venus is obscured ...

Venus is the second planet from the Sun, orbiting it every 224.7 Earth days. It has the longest rotation period (243 days) of any planet in the Solar System and rotates in the opposite direction to most other planets (meaning the Sun would rise in the west and set in the east). It does not have any natural satellites. It is named after the Roman goddess of love and beauty.

Note: Some investigators prefer the term "persistent contrails" to "chemtrails" arguing that all jet trails are in fact chemical trails, since even non-persistent contrails are the condensation effect of water vapour on jet exhaust chemicals. The key difference therefore is the nature of the chemicals which constitute the basis of the trails.
