

robots special day oxford pdf

A robot is a machine—especially one programmable by a computer—capable of carrying out a complex series of actions automatically. Robots can be guided by an external control device or the control may be embedded within. Robots may be constructed to take on human form but most robots are machines designed to perform a task with no regard to how they look.

Robot - Wikipedia

Robotics is the scientific and engineering discipline concerned with the creation, composition, structure, evaluation, and properties of embodied artificial capabilities.. It does not include naturally occurring capabilities (which would be part of biology) or artificial intelligence without a physical presence (which would be part of computer science).. It includes facets of mechanical ...

Robotics - Wikipedia

[This is the third part of a four part essay—here is Part I.]. If we are going to develop an Artificial Intelligence system as good as a human, an ECW or SLP say, from Part II of this essay, and if we want to get beyond that, we need to understand what current AI can hardly do at all.
