ASA Alloys - Canada's Premier Distributor of Specialty Metals. We have the largest selection of Aluminum and Stainless Bar, Plate and Sheet, along with our Aluminum Extrusions and Custom Shapes ensures that our customers get the material they need, when they need it. And if we don't carry something that you are looking for, our knowledge and experienced sales specialists can use our extensive ...

Alloying Elements. As pure magnesium has too low mechanical strength to be used as is, it must be alloyed with other elements which confer improved properties.. The Mg-Al-Zn group of alloys, contains Aluminum and Zinc, which are the most common alloying elements for room temperature applications.. Alloying elements Thorium, Cerium and Zirconium (without Aluminum) are used for elevated ...

Anodized titanium is used in a recent generation of dental implants. An anodized oxide layer has a thickness in the range of 30 nanometers (1.2 Å— 10 Å in) to several micrometers. Standards for titanium anodizing are given by AMS 2487 and AMS 2488.

Anodizing - Wikipedia

Passivation, in physical chemistry and engineering, refers to a material becoming "passive," that is, less affected or corroded by the environment of future use. Passivation involves creation of an outer layer of shield material that is applied as a microcoating, created by chemical reaction with the base material, or allowed to build from spontaneous oxidation in the air.

Passivation (chemistry) - Wikipedia

This Data is indicative only and as such is not to be relied upon in place of the full specification. In particular, mechanical property requirements vary widely with temper, product and product dimensions.
