the applications of a sensor network. It is a part of the official release of TinyOS. Its security preferences are authentication encryption (TinySecAE) and authentication only (TinySecAuth). In [8], a multilevel security mechanism is introduced by using a data-oriented random number generator to encrypt a tag of frames.

Incorporating work from Internet security, ubiquitous computing, and distributed systems, we outline security properties that must be considered when designing a secure sensor network. Finally, we propose challenges for sen-
